

VERSA TUFF STRUCTURE

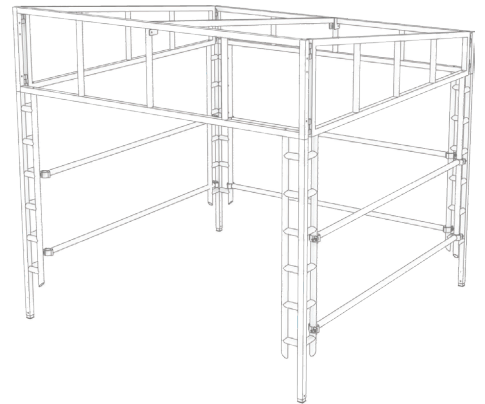

All Access Staging is proud to introduce the first medium-duty canopy on the market, the Versa Tuff Structure (VTS). It's "tuffer" than your usual pop-up tent, but more lightweight and easier to assemble than a bulky, expensive truss structure.

VTS features 12 inches of height adjustment for ultimate versatility. It is easy to assemble – two people can build it in just minutes without any tools – yet sturdy. Because of its design and use of connectors, the shelter is capable of supporting displays and accessories weighing up to 300 lbs.

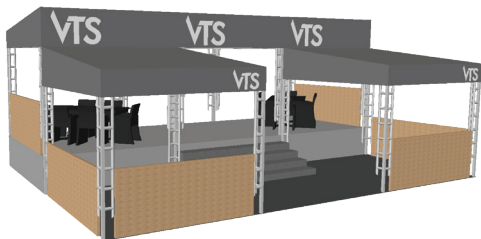

Because of its pitched roof, rain never flows off the front. The roof is made of heavy-duty vinyl and attached with Velcro. You can choose any color soft goods or digital image for your roof, in either mesh or clear.

VTS presents a huge opportunity for promotional branding, custom graphics, product display, and marketing activation. Make your logo and other branding materials center stage for maximum exposure. We can customize your VTS with a variety of accessories, including an assortment of brackets to facilitate product displays, side panel bars, counters, shelves, lighting, and graphic products.

Make VTS part of your VIP hospitality structure, trade show booth, utility tent, pit structure, or simply for a recreational shelter at any event. Multiple units can easily be combined to create larger structures. The configuration possibilities and potential uses are endless.
