BENEFITS

VERSA ENGINEERING

The Versa Deck has been engineered to the highest level and has a structural load rating of 130psf. A full structural engineering package is available upon request.

SERVICE

The Versa Deck is backed by excellent customer service and sales team at All Access. Our team can answer questions and provide solutions for whatever staging challenges you have. We stand behind our products and pride ourselves on delivering a top-notch experience for our clients.

FEATURES

ALUMINUM EXTRUSION

Versa Decks are made with custom lightweight aluminum extrusions, allowing us to maximize strength and features while keeping weight and thickness to a minimum.

PLYWOOD TOP

Versa Decks use high-quality birch plywood to allow for a higher point load capacity and the ability to screw directly into the deck. A marine plywood option is available for outdoor applications. The plywood is painted with durable black paint and is easily replaced by removing screws accessible from below. Additional cladding configurations are available, including bar grating and plexi.

HARDWARE SLOT

Versa Decks include a structural slot to fit standard 3/8" hex-head bolt. These are fed in thru plunge holes on each face of the deck and can be used to attach handrail and other accessories.

PIPE POCKETS

Versa Decks also have custom extrusion pipe pocket welded into the frame. The thick-walled pipe pockets accept standard 1.5" Sch. 40 pipes as well as 2" diameter tubes. They make it easy to install and remove pipe legs with a simple thumb screw. Offset locations are also included to allow for caster spin when using rolling pipe legs.

SPRING PIN DECK LOCATORS

Versa Decks feature stainless steel retractable spring pin locators to help maintain alignment and preventing sawtoothing for long deck runs. The spring pin fits into a corresponding hole on an adjacent deck. In configurations where there is not an alignment hole, the pin pushes into the deck to stay out of the way. The spring pins are also easily removed with a hex-key should it be necessary.

ROTARY LOCKS

Versa Decks come with rotary locks in the sides for quickly latching to their adjacent counterpart. A hex-key is used to rotate the locks from on top of the deck. Rotary lock locations have been chosen for a maximum amount of latching configurations.

VELCRO ATTACHMENT

Versa Decks come with 1" male velcro inset into the extrusion. This can be used to quickly and easily attach fabric skirting or light fascia to the edge of the deck.

SUPPORT OPTIONS

Versa Decks can be supported on pipe legs or on one of several styles of custom scaffolding provided in the Versa staging system. Versa "Billy Goat" decks that are 8" thick are available for applications that require long pipe legs to allow for more stability.
